Reasons for Allowance

Claims 1-10 are allowed for the reason the prior art does not teach in claimed combination the steps of scanning a plurality of gray scale pixels to obtain digital data as claimed... comparing the three digitized primary color brightness values as claimed ... retrieving three color space conversion values as claimed... transmitting the three color space conversion values belonging to the gray scale pixels to the host terminal and conducting an addition of all three color space conversion values belonging the gray scale pixel inside the host as claimed.

Claims 11-15 are allowed for the reason the prior art does not teach or suggest in claimed combination, a buffer within the color scanner coupled to the memory unit for holding at least some of the digital data scanned from the gray scale pixels, wherein the digital data contains three digitized primary color brightness values and each digitized primary color brightness value corresponds to a group of gamma tables and a control device within the color scanner coupled to the memory unit and the buffer for comparing the three digitized primary color brightness values of the scanned gray scale pixels with corresponding index addresses of the three groups of gamma tables, retrieving the color space conversion values of scanned gray scale pixels from the storage spaces corresponding to the index addresses and transferring the color space conversion values to the host terminal.
